LIFE SCIENCES EDITORIAL POLICY

LIFE SCIENCES was founded with the intention that scientific reports would be published expeditiously, within weeks of acceptance. *LIFE SCIENCES* has adhered to its original objective by keeping abreast of current advances in communication and publication technologies to rapidly disseminate new and significant information in pharmacology.

LIFE SCIENCES is an international weekly journal publishing full reports on the pharmacological aspects of biochemistry, neurobiology, endocrinology, immunology, molecular biology, physiology and toxicology. Contributions are reviewed and accepted on the basis of their scientific merit and the need for rapid publication. Contained in the Journal:

- New information
- Minireviews on selected aspects of a field undergoing rapid change
- Brief conceptual papers based on original data
- Relevant clinical discoveries
- Collections of selected papers on current concepts in a particular field

PHARMACOLOGY LETTERS is a section providing for the rapid review and publication in English of original research involving rigorous experimental studies of immediate interest on any aspect of basic pharmacology. Clinical studies will be included if they have a direct bearing on the mechanism of drug action. Also invited are commentaries, new methodologies and manuscripts on pharmacologic theory (either conceptual or mathematical). Articles in the Sections should be limited to 4 to 6 pages with a maximum figure-plus-table combination of 4. It is recommended that no more than 20 references be included in any paper.

CELLULAR AND MOLECULAR BIOLOGY

Editor-in-Chief: **RAYMOND WEGMANN,** *Résidence Haussmann - Bât. A, 1 avenue du Pavé Neuf, F-93160 Noisy-le-Grand, France*

The journal publishes original articles in the fields of cellular and molecular biology and enzymology, applied to human tissues as well as to animals and plants. Unlike more traditional histochemical journals, *Cellular and Molecular Biology* is open to a more extensive field of research since the evolution of biology and biochemistry becomes more and more a matter for inter-disciplinary exchange. For that reason contributions to biological, medical, dental, veterinary, pharmacological and biological research are published provided that they demonstrate the link between structure and biochemical function.

COMPARATIVE BIOCHEMISTRY AND PHYSIOLOGY PARTS A,B,C

An International Journal

Editor: **GERALD A KERKUT,** *Department of Physiology and Biochemistry, University of Southampton, Southampton S09 3TU, UK*

Comparative Biochemistry and Physiology publishes papers that deal with the biochemistry, physiology or pharmacology of invertebrate and vertebrate animals. Particular attention is paid to papers in which the subject is approached from a comparative point of view. There are occasional review articles and book reviews.
The journal is published in three separate parts and subscribers can purchase each part separately or take out a combined subscription to all three.
PARTS A & B publish papers that contain the results of original research on the biochemistry and physiology of animals.
PART C of the journal deals with the study of the action of drugs and chemicals on cells, tissues and whole animals. It is particularly concerned with the difference between species and organs in their responses to drugs.
This section will carry papers of interest to workers on insecticides, molluscicides and antiprotozoan drugs.

INSTRUCTIONS TO AUTHORS
LIFE SCIENCES
Including PHARMACOLOGY LETTERS SECTION

LIFE SCIENCES is an international weekly journal publishing full reports on the pharmacological aspects of biochemistry, neurobiology, endocrinology, immunology, molecular biology, physiology and toxicology. Contributions are reviewed and accepted on the basis of their scientific merit and the need for rapid publication. Contained in the Journal:

- New scientific information
- Minireviews on selected aspects of a scientific field underegoing rapid change
- Brief conceptual papers based on original and/or literature data.
- Relevant clinical discoveries
- Collections of selected papers on current concepts in a particular fiels
- Symposium papers

Authors should submit names of *four qualified reviewers* for their work, including addresses and, if possible, FAX numbers.

PHARMACOLOGY LETTERS is a section providing for the rapid review and publication in English of original research involving rigorous experimental studies of immediate interest on any aspect of basic pharmacology. Clinical studies will be included if they have a direct bearing on the mechanism of drug action. Also invited are commentaries, new methodologies and manuscripts on pharmacologic theory (either conceptual or mathematical). Articles in the Section should be 4 to 6 pages in length with a maximum figure-plus-table combination of 4. It is recommended that no more than 20 references be included in any paper.

TYPING INSTRUCTIONS: Submit an original and two copies of the manuscript. An eight-page limit is preferred. The following detailed instructions are necessary to allow direct reproduction of the manuscript for rapid publishing. ***If instructions are not followed, the manuscript will be returned for retyping.***

To enhance the presentation of the Journal, we encourage you to work with us to achieve a pleasing uniformity of typeface and layout; however, it is not our intention to place restrictions on authors who do not have access to state-of-the-art printing capabilities. The following typefaces, in order of desirability, are preferred: Times Roman, Helvetica, Courier.

FORMAT FOR PHARMACOLOGY LETTERS SECTION: Observe "General Format" and "Title" on these Instructions. Following the author paragraph, *quadruple space*, then type a black line across the entire width of text. On the first line below the black line, at left margin, type: Abstract. Continue on the same line with a statement summarizing the important points of the text. The abstract paragraph should extend across the entire width of text. Under the abstract, type another black line across the width of text. *Double-space* below the black line, and type Introduction (underlined and centered over text). Continue with Instructions beginning with "Major Headings".

GENERAL FORMAT: Paper size should be 8 1/2" (216mm) by 11" (279mm) and the typing area must be exactly 6 5/8" (168mm) wide by 9 7/8" (250mm) long. The entire typing area of each page must be filled, leaving no wasted space. Text should be *single-spaced* on good quality white bond paper, and *double-spaced* between paragraphs.

Special care should be taken to insure that symbols, superscripts and subscripts are legible and do not overlap onto lines above or below. Table and figure legends should be easily discernible from the text. Small italic typefaces are unsuitable. Make sure text lines are equidistant.

It is imperative that manuscripts are typed with a black carbon ribbon, or ink-jet or laser printer; this insures a superior quality reproduction in the photo-offset process. Dot matrix print is not acceptable. No erasure marks, smudges, spots, pencil or ink corrections or creases are allowed.

TITLE: On first page of manuscript, start title 1" (25mm) down from top text margin. Type title in all capital letters, centered on the width of the typing area and single-spaced if more than one line is required. The title should be brief, descriptive and have all words spelled out. *Double-space*, then type the author(s) name(s), single-spaced if more than one line is required. *Double-space*, then type author(s) address(es), also single-spaced, capitalizing the first letter of main words. *Quadruple-space* before Summary (**LIFE SCIENCES**) or Abstract (**PHARMACOLOGY LETTERS**).

SUMMARY: (for **LIFE SCIENCES**) Center, type and underline summary heading, capitalizing the first letter. A *double-space* should separate the heading from the summary text. Indent approximately 1/2" (13mm) from both left and right margins for typing the summary. The summary should be intelligible to the reader without reference to the body of the paper and be suitable for reproduction by abstracting services.

Introduction to the text (without a heading) should begin two spaces below the summary using full margins.

MAJOR HEADINGS: Headings throughout the paper should be arranged to increase clarity. Major headings, e.g. Methods, Results, Discussion, Acknowledgments and References should be centered on the width of the typing area, first letter capitalized and underlined. Other headings should be arranged to indicate their relative importance.

SYMBOLS AND FORMULAE: This material should be typed.

TABLES: Tables should be typed within the main body of the manuscript, but set apart, to avoid confusion with the text. The word TABLE, all letters capitalized, should be centered with table number (Roman numerals) above the table. The caption should have the first letters of all main words capitalized. A single table should not overlap onto the following page. Legends should be typed beneath table and easily discernible from the main text.

FIGURES: Glossy prints or PMTS of figures must be supplied to fit within their allotted spaces in the manuscript. Laser printed originals are acceptable. Figures should be incorporated into the main body of the manuscript using as little space as possible without hindering legibility after a 25% reduction in the production process. Figures should be identified in pencil on the reverse side and be located, but not cemented, in the appropriate places above the descriptive legends. *Indent legend* five spaces each side of width margins to distinguish from text. The abbreviation FIG. with the figure number (Arabic numerals) should be centered above the legend.

HALF-TONES (PHOTOGRAPHS): Photographs must be in black and white. A clear print, large enough to be legible after 25% reduction, is required.

FOOTNOTES: These should be typed single-spaced at the bottom of the appropriate page and separated from the text by at least a double-space and a short line immediately above.

REFERENCES: Consecutive numbers in parentheses should be used to indicate the references in the text, e.g. (1,2). The full reference should be cited at the end of the manuscript. *Single-space* between as well as within references. References should contain names of all authors in CAPITAL letters (initials typed first, surnames following), title of journal (abbreviated, if possible, in accordance with *World List of Scientific periodicals*), volume number (underlined), first and last page numbers of article and year of publication (in parentheses) as illustrated below. References to books should contain author(s) names, in same format as above, title (underlined and first letter of main words capitalized), editor(s) names, if any, page number(s), publisher's name and location and year of publication (in parentheses). The phrase, "submitted for publication," is not considered a reference and should be placed in parentheses at the appropriate place in the text.

1. A.B. NORMAN, G. BATTAGLIA, A.L. MORROW and I. CREESE, Eur. J. Pharmacol. *106* 461-462 (1985).
2. IAN CREESE, *Neurotransmitter Receptor Binding*, Henry I. Yamamura, S.J. Enna, and Michael J. Kuhar (eds), 189-233, Raven Press, New York (1985).

RUNNING TITLE: A running title of not more than 40 spaces should be provided on a separate sheet.

KEY WORDS: One or more key words must be provided by authors for indexing of their article. Key words should be followed by enough explanatory information to make them useful to readers in a subject index, published at the end of every volume. Abbreviated forms of chemical compounds are not acceptable. Spell out entirely, using the official nomenclature

Example: cannabidiol, effect on testicular esterase
L-dihydroxyphenylalanine (L-DOPA), effect on protein synthesis

PAGINATION: Number each page in light blue pencil in lower right-hand corner.

CORRESPONDING AUTHOR: Place at bottom of first page, under a short black line. Extend name and address across entire width of page.

FURTHER INFORMATION: The information to contributors, especially nomenclature and abbreviations, contained in the Proceedings of the National Academy of Sciences may be used as a guide for preparation of manuscripts for any points not covered above.

COPYRIGHT AGREEMENTS: Since the enactment of U.S. Copyright laws on January 1, 1978, a Transfer of Copyright Agreement is required by the publisher to accompany every article accepted for publication. Upon acceptance for publication, the corresponding author of each manuscript will be sent an agreement to be completed prior to preparation for publication.

Whilst every effort is made by the publishers and editorial board to see that no inaccurate or misleading data, opinion or statement appears in this journal, they wish to make it clear that the data and opinions appearing in the articles and advertisements herein are the sole responsibility of the contributor or advertiser concerned. Accordingly, the publishers, the editorial board and editors and their respective employees, officers and agents accept no responsibility or liability whatsoever for the consequences of any such inaccurate or misleading data, opinion or statement.
